

BRICK LITE

TOP PRODUCTIVITY FOR HAULING BRICKS & BLOCKS

BrickLite is the Charlton body dedicated to the high capacity transport of bricks and blocks. In this application, what really matters are a first class payload and proven long term durability. Typically operating at either 32 or 44 tonnes gvw, BrickLite's proven productivity is the perfect complement to any chassis. And for drawbars, we'll also build a BrickLite trailer too. **BrickLite gets the Block Vote!**

BRICK LITE

BRICKLITE IS BEST BECAUSE:

- Purpose designed for its role
- Proven strength and durability
- Maximum payload at high GVWs
- Wide range of options, including bespoke
- Drawbar trailers too
- Complete build, install, finish and paint at Charlton
- Full parts and service support
- Unrivalled value over long service life

"We really needed a bodybuilder that could handle the whole job from taking a straightforward ex-factory chassis cab to delivering us a complete vehicle, ready to work. Not only that, the bodybuilder would also have to demonstrate real expertise and experience in supplying and fitting the necessary equipment, as well as being able to deliver a truck that meets our very precise operating requirements.

The result has been highly successful. BrickLite has performed exceptionally well, and we have no hesitation in preferring Charlton bodies for further vehicles entering our fleet."

Kevin Miles
